

# ENVIRONMENT POLICY

**ConsMin is committed to minimising the adverse impacts of its operations and activities on the environment.**

We recognise that good environmental performance is key to our sustainability. We seek to create a culture where biodiversity is protected and preserved, resources are used efficiently, and, where practicable, waste and pollution is prevented.

To deliver on this commitment, ConsMin will:

- Implement and maintain an effective environmental management system, to identify and manage environmental risk, track environmental objectives and targets, and facilitate continuous improvement.
- Comply with all applicable legal and statutory requirements, industry standards and guidelines in relation to environmental management.
- Foster a culture that embraces continuous education and training, active leadership, and the engaged participation of employees in environmental issues.
- Undertake progressive rehabilitation to achieve agreed closure outcomes, implement environmental best practices and appropriately manage our environmental liabilities.
- Strive for sustainability by conserving resources, promoting recycling, and embracing renewable energy opportunities where possible.
